

Based on my research, here's a comprehensive **7-day study plan** with direct links to all the resources you need:

## Complete 7-Day Linux Kernel Interview Preparation Plan

### Overview

| Day | Focus Area                       | Hours   |
|-----|----------------------------------|---------|
| 1   | Kernel Architecture & Setup      | 4-6 hrs |
| 2   | Process Management & Scheduling  | 4-6 hrs |
| 3   | Memory Management                | 4-6 hrs |
| 4   | System Calls                     | 4-5 hrs |
| 5   | Synchronization & Concurrency    | 4-6 hrs |
| 6   | Kernel Modules & Device Drivers  | 4-6 hrs |
| 7   | Review & Mock Interview Practice | 4-6 hrs |

## Day 1: Kernel Architecture & Development Setup

### Learning Objectives

- Understand what the Linux kernel is and its architecture
- Set up a development environment
- Learn the difference between user space and kernel space
- Build your first kernel from source

### Reading Materials

| Resource                                     | Link  | Time   |
|--|---|--------|
| HOWTO do Linux kernel development (Official) | <a href="https://www.kernel.org/doc/html/latest/process/howto.html">kernel.org/doc/html/latest/process/howto.html</a> | 45 min |

| Resource  | Link  | Time   |
|---|---|--------|
| Linux Kernel Architecture Overview                      | <a href="https://kernel.org/doc/html/latest/">kernel.org/doc/html/latest/</a>   | 1 hr   |
| A Beginner's Guide to Linux Kernel Development (LFD103) | <a href="https://training.linuxfoundation.org/training/a-beginners-guide-to-linux-kernel-development-lfd103/">training.linuxfoundation.org/training/a-beginners-guide-to-linux-kernel-development-lfd103/</a> | 2 hrs  |
| Kernel Newbies - Getting Started                        | <a href="https://kernelnewbies.org/KernelBuild">kernelnewbies.org/KernelBuild</a>   | 30 min |

## 🛠️ Hands-On Tasks

### 1. Set up your development environment:

```
bash

# Install required packages (Ubuntu/Debian)
sudo apt update
sudo apt install build-essential libncurses-dev bison flex libssl-dev libelf-dev

# Clone the kernel source
git clone --depth=1 https://git.kernel.org/pub/scm/linux/kernel/git/torvalds/linux.git
cd linux
```

### 2. Configure and build the kernel:

```
bash

# Copy current config
cp /boot/config-$(uname -r) .config
make olddefconfig

# Build (use -j$(nproc) for parallel compilation)
make -j$(nproc)
```

## Key Concepts to Master

- Monolithic kernel vs Microkernel
- User space vs Kernel space
- Kernel rings (Ring 0 vs Ring 3)
- Role of the bootloader (GRUB)

## Day 2: Process Management & Scheduling

### Learning Objectives

- Understand `task_struct` and process descriptors
- Learn process states and lifecycle
- Master the CFS and EEVDF schedulers
- Understand context switching

## Reading Materials

| Resource                                 | Link  | Time   |
|--|---|--------|
| Process Scheduling in Linux              | <a href="https://scaler.com/topics/operating-system/process-scheduling-in-linux/">scaler.com/topics/operating-system/process-scheduling-in-linux/</a>         | 45 min |
| EEVDF Scheduler Documentation (Official) | <a href="https://kernel.org/doc/html/latest/scheduler/sched-eevdf.html">kernel.org/doc/html/latest/scheduler/sched-eevdf.html</a>                             | 30 min |
| CFS Scheduler Documentation              | <a href="https://kernel.org/doc/html/latest/scheduler/sched-design-CFS.html">kernel.org/doc/html/latest/scheduler/sched-design-CFS.html</a>                   | 45 min |
| Linux Inside: Process Scheduler          | <a href="https://0xax.gitbooks.io/linux-insides/content/SysCall/linux-syscall-4.html">0xax.gitbooks.io/linux-insides/content/SysCall/linux-syscall-4.html</a> | 1 hr   |
| Kernel Source: <code>task_struct</code>  | <a href="https://elixir.bootlin.com/linux/latest/source/include/linux/sched.h">elixir.bootlin.com/linux/latest/source/include/linux/sched.h</a>               | 30 min |

## Key Concepts to Master

Process States

| State                 | Code | Description                            |
|-----------------------|------|--|
| Running               | R    | Currently executing or in run queue    |
| Interruptible Sleep   | S    | Waiting for event, can be interrupted  |
| Uninterruptible Sleep | D    | Waiting for I/O, cannot be interrupted |
| Stopped               | T    | Stopped by signal (SIGSTOP)            |
| Zombie                | Z    | Terminated but not reaped by parent    |

## Scheduler Evolution

0(1) Scheduler → CFS (2.6.23) → EEVDF (6.6+)

## 🛠️ Hands-On Tasks

```
bash

# Observe process states
ps aux | head -20

# Watch scheduler in action
watch -n 1 'cat /proc/loadavg'

# View scheduling info for a process
cat /proc/self/sched

# Check nice values
nice -n 10 sleep 100 &
ps -l
```

## 💻 Day 3: Memory Management

## 🎯 Learning Objectives

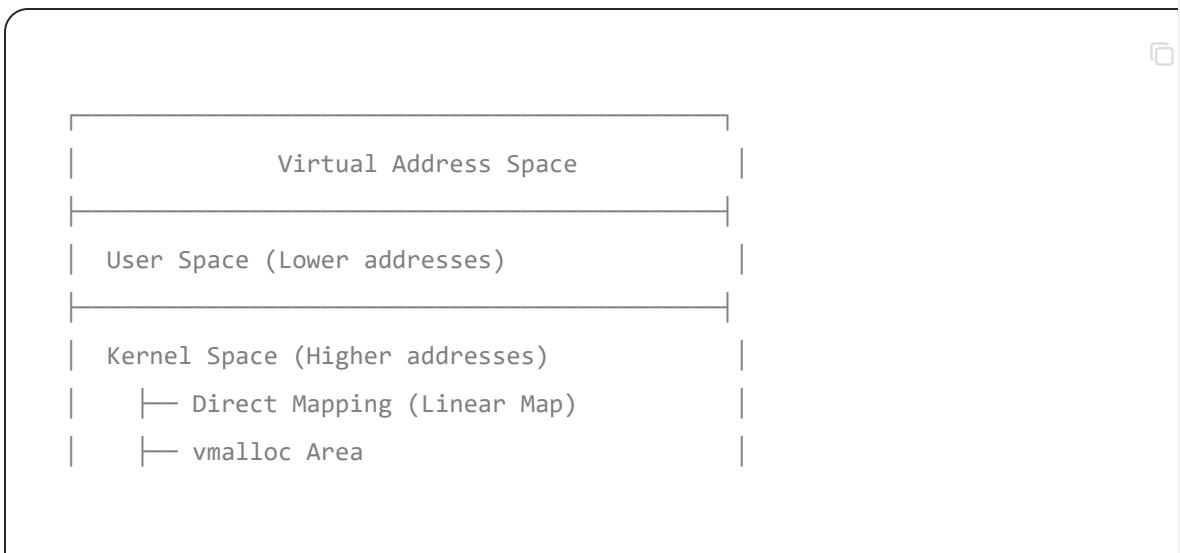

- Understand virtual memory and paging
- Learn about page tables (multi-level)
- Master the Buddy Allocator and SLUB allocator
- Understand `kmalloc()` vs `vmalloc()`

## 📘 Reading Materials

| Resource                                   | Link  | Time    |
|--|---|---------|
| Memory Management Documentation (Official) | <a href="https://kernel.org/doc/html/latest/admin-guide/mm/index.html">kernel.org/doc/html/latest/admin-guide/mm/index.html</a> | 1 hr    |
| Linux Inside: Memory Management            | <a href="https://0xax.gitbooks.io/linux-insides/content/MM/">0xax.gitbooks.io/linux-insides/content/MM/</a>                     | 1.5 hrs |
| SLUB Allocator                             | <a href="https://kernel.org/doc/html/latest/mm/slub.html">kernel.org/doc/html/latest/mm/slub.html</a>                           | 30 min  |
| Understanding Linux Virtual Memory Manager | <a href="https://kernel.org/doc/gorman/">kernel.org/doc/gorman/</a>   | 1 hr    |
| Multi-Gen LRU (MGLRU)                      | <a href="https://kernel.org/doc/html/latest/mm/multigen_lru.html">kernel.org/doc/html/latest/mm/multigen_lru.html</a>           | 30 min  |

## 📝 Key Concepts to Master

Memory Hierarchy

## Memory Zones

| Zone         | Purpose                          |
|--------------|----------------------------------|
| ZONE_DMA     | Legacy devices (first 16MB)      |
| ZONE_NORMAL  | Directly mapped kernel memory    |
| ZONE_HIGHMEM | Memory above 896MB (32-bit only) |
| ZONE_MOVABLE | Migratable pages for hot-plug    |

## kmalloc vs vmalloc

| Feature         | kmalloc()         | vmalloc()         |
|-----------------|-------------------|-------------------|
| Physical Memory | Contiguous        | Non-contiguous    |
| Virtual Memory  | Contiguous        | Contiguous        |
| Speed           | Faster            | Slower            |
| Use Case        | Small allocations | Large allocations |

## 🛠️ Hands-On Tasks

bash

```

# View memory info
cat /proc/meminfo

# Monitor memory in real-time
vmstat 1

# View slab allocator statistics
sudo slabtop

# Check page size
  
```

```
getconf PAGESIZE

# View memory zones
cat /proc/buddyinfo
```

## Day 4: System Calls

### Learning Objectives

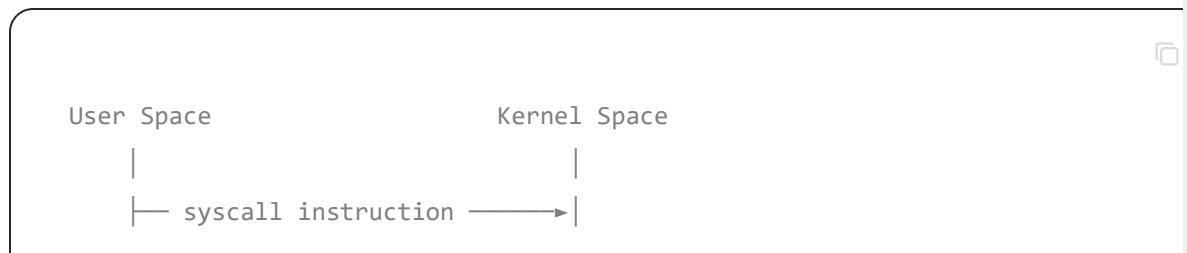

- Understand how system calls work
- Learn the syscall entry/exit mechanism
- Trace system calls with `strace`
- Understand the syscall table

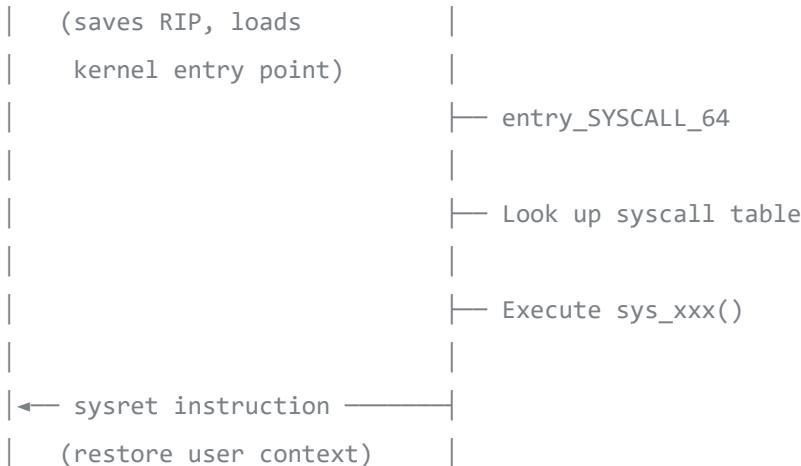

### Reading Materials

| Resource                                   | Link  | Time      |
|--|---|-----------|
| System Calls Documentation (Official)      | <a href="https://kernel.org/doc/html/latest/process/adding-syscalls.html">kernel.org/doc/html/latest/process/adding-syscalls.html</a>                   | 45 min    |
| Linux Inside: System Calls                 | <a href="https://0xax.gitbooks.io/linux-insides/content/SysCall/">0xax.gitbooks.io/linux-insides/content/SysCall/</a>                                   | 1.5 hrs   |
| The Definitive Guide to Linux System Calls | <a href="https://packagecloud.io/blog/the-definitive-guide-to-linux-system-calls/">packagecloud.io/blog/the-definitive-guide-to-linux-system-calls/</a> | 1 hr      |
| Searchable Linux Syscall Table (x86_64)    | <a href="https://filippo.io/linux-syscall-table/">filippo.io/linux-syscall-table/</a>   | Reference |
| Syscall Man Pages                          | <a href="https://man7.org/linux/man-pages/man2/syscalls.2.html">man7.org/linux/man-pages/man2/syscalls.2.html</a>                                       | Reference |

### Key Concepts to Master

System Call Flow (x86\_64)

## Important System Calls to Know

| Syscall  | Purpose                   |
|--|---------------------------|
| <code>fork()</code> / <code>clone()</code>                       | Create new process/thread |
| <code>exec()</code>  | Replace process image     |
| <code>open()</code> / <code>read()</code> / <code>write()</code> | File I/O                  |
| <code>mmap()</code>  | Memory mapping            |
| <code>ioctl()</code>   | Device control            |
| <code>socket()</code>  | Network communication     |

## 🛠️ Hands-On Tasks

bash

```

# Trace system calls of a command
strace ls -la

# Count syscalls
strace -c ls -la

# Trace specific syscalls
strace -e open,read,write cat /etc/passwd
  
```

```
# View syscall numbers
ausyscall --dump
```

## Day 5: Synchronization & Concurrency

### Learning Objectives

- Master spinlocks, mutexes, and semaphores
- Understand when to use each primitive
- Learn about RCU (Read-Copy-Update)
- Understand deadlock prevention

### Reading Materials

| Resource                               | Link   | Time    |
|--|--|---------|
| Unreliable Guide to Locking (Official) | <a href="http://kernel.org/doc/html/latest/kernel-hacking/locking.html">kernel.org/doc/html/latest/kernel-hacking/locking.html</a> | 1 hr    |
| Linux Inside: Synchronization          | <a href="http://0xax.gitbooks.io/linux-insides/content/SyncPrim/">0xax.gitbooks.io/linux-insides/content/SyncPrim/</a>             | 1.5 hrs |
| RCU Documentation                      | <a href="http://kernel.org/doc/html/latest/RCU/whatisRCU.html">kernel.org/doc/html/latest/RCU/whatisRCU.html</a>                   | 45 min  |
| Mutex API Reference                    | <a href="http://kernel.org/doc/html/latest/locking/mutex-design.html">kernel.org/doc/html/latest/locking/mutex-design.html</a>     | 30 min  |
| Completions API                        | <a href="http://kernel.org/doc/html/latest/scheduler/completion.html">kernel.org/doc/html/latest/scheduler/completion.html</a>     | 20 min  |

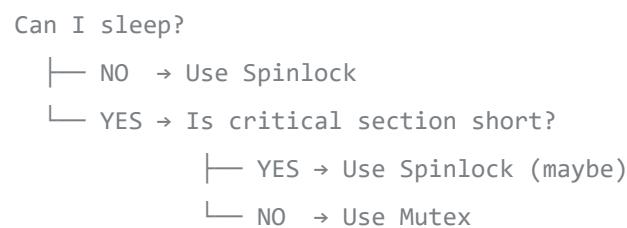

### Key Concepts to Master

#### Comparison Table

| Feature           | Spinlock  | Mutex   | Semaphore   |
|-------------------|---|---|---|
| Sleeping          |  No  |  Yes |  Yes |
| Interrupt Context |  Yes |  No  |  No  |

| Feature   | Spinlock | Mutex  | Semaphore |
|-----------|----------|--------|-----------|
| Ownership | No       | Yes    | No        |
| Count     | Binary   | Binary | Counting  |
| Overhead  | Low      | Medium | Medium    |

When to Use What

Spinlock Variants

```

c

spin_lock()          // Basic, disables preemption
spin_lock_irq()      // Also disables local interrupts
spin_lock_irqsave()  // Saves and restores IRQ state (SAFEST)
spin_lock_bh()        // Disables bottom halves
  
```

## 🛠️ Hands-On Tasks

bash

```

# Check for lock contention
sudo perf lock record -a sleep 5
sudo perf lock report
  
```

```
# View lock statistics (if enabled)
cat /proc/lock_stat

# Monitor for deadlocks
echo 1 | sudo tee /proc/sys/kernel/hung_task_warnings
```

## 💻 Day 6: Kernel Modules & Device Drivers

### 🎯 Learning Objectives

- Write and load kernel modules
- Understand the device model
- Learn about character and block devices
- Understand `/dev` and `sysfs`

### 📘 Reading Materials

| Resource  | Link  | Time          |
|---|---|---------------|
| Linux Kernel Module Programming Guide (LKMPG) ★ | <a href="https://sysprog21.github.io/lkmpg/">sysprog21.github.io/lkmpg/</a>   | 2 hrs         |
| LKMPG GitHub (Latest Source)                    | <a href="https://github.com/sysprog21/lkmpg">github.com/sysprog21/lkmpg</a>   | Reference     |
| Linux Device Drivers, 3rd Edition (Free)        | <a href="https://lwn.net/Kernel/LDD3/">lwn.net/Kernel/LDD3/</a>   | 1 hr (Ch 1-2) |
| Driver Model Documentation                      | <a href="https://kernel.org/doc/html/latest/driver-api/driver-model/">kernel.org/doc/html/latest/driver-api/driver-model/</a> | 30 min        |
| Kernel Newbies: First Patch Tutorial            | <a href="https://kernelnewbies.org/FirstKernelPatch">kernelnewbies.org/FirstKernelPatch</a>                                   | 30 min        |

### 🛠 Hands-On: Write Your First Kernel Module

1. Create `hello.c` :

c

```
#include <linux/init.h>
#include <linux/module.h>
#include <linux/kernel.h>

MODULE_LICENSE("GPL");
MODULE_AUTHOR("Your Name");
MODULE_DESCRIPTION("Hello World Kernel Module");
MODULE_VERSION("1.0");

static int __init hello_init(void)
{
    printk(KERN_INFO "Hello, Kernel World!\n");
    return 0; // 0 = success
}

static void __exit hello_exit(void)
{
    printk(KERN_INFO "Goodbye, Kernel World!\n");
}

module_init(hello_init);
module_exit(hello_exit);
```

## 2. Create `Makefile` :

```
makefile

obj-m += hello.o

KDIR := /lib/modules/$(shell uname -r)/build

all:
    make -C $(KDIR) M=$(PWD) modules

clean:
    make -C $(KDIR) M=$(PWD) clean
```

### 3. Build and test:

```
bash

# Install headers
sudo apt install linux-headers-$({uname -r})

# Build
make

# Load module
sudo insmod hello.ko

# Check kernel log
dmesg | tail -5

# List loaded modules
lsmod | grep hello

# Unload module
sudo rmmod hello

# Check log again
dmesg | tail -5
```

#### Key Concepts to Master

- `module_init()` and `module_exit()` macros
- `printk()` log levels (KERN\_INFO, KERN\_ERR, etc.)
- Module parameters with `module_param()`
- Character device registration with `register_chrdev()`

#### Day 7: Review & Mock Interview Practice

#### Learning Objectives

- Review all key concepts

- Practice explaining concepts out loud
- Work through common interview questions
- Identify and fill knowledge gaps

## Review Resources

| Resource                             | Link   | Time      |
|--------------------------------------|--|-----------|
| Top Linux Kernel Interview Questions | <a href="http://adaface.com/blog/kernel-interview-questions/">adaface.com/blog/kernel-interview-questions/</a>                 | 1 hr      |
| Linux Kernel Coding Style            | <a href="http://kernel.org/doc/html/latest/process/coding-style.html">kernel.org/doc/html/latest/process/coding-style.html</a> | 30 min    |
| Kernel Source Browser (Elixir)       | <a href="http://elixir.bootlin.com/linux/latest/source">elixir.bootlin.com/linux/latest/source</a>                             | Reference |

### Top 20 Interview Questions to Practice

Process Management

1. What is `task_struct`?
2. Explain `fork()`, `exec()`, and `wait()` system calls.
3. What is a zombie process? How do you prevent them?
4. Explain the difference between CFS and EEVDF schedulers.
5. What triggers a context switch?

Memory Management

6. How does virtual memory work?
7. What is a page fault? Types of page faults?
8. Difference between `kmalloc()` and `vmalloc()`?
9. What is the Buddy Allocator?
10. Explain the SLUB allocator.

Synchronization

11. When do you use spinlock vs mutex?
12. Can you sleep while holding a spinlock? Why not?
13. What is RCU and when is it used?

14. Explain the difference between `spin_lock()` and `spin_lock_irqsave()`.

15. What is a deadlock? How do you prevent it?

## System Calls & Modules

16. What happens when you call `read()` from user space?

17. How do you add a new system call to the kernel?

18. What is the difference between `insmod` and `modprobe`?

19. What does `MODULE_LICENSE("GPL")` do?

20. How do interrupts work? Top-half vs bottom-half?

## 🎤 Mock Interview Exercise

Practice answering these scenario-based questions:

1. "Walk me through what happens when you type `ls` in a terminal."

- *Cover: shell parsing, fork(), exec(), syscalls, file system, output*

2. "A process is stuck in 'D' state. How do you debug it?"

- *Cover: uninterruptible sleep, I/O wait, cat /proc/<pid>/stack*

3. "How would you debug a kernel panic?"

- *Cover: dmesg, crash dump, addr2line, stack trace analysis*

## ✓ Final Checklist

Before your interview, make sure you can:

- Explain kernel architecture (monolithic, user/kernel space)
- Describe process states and transitions
- Explain virtual memory and paging
- Compare spinlock, mutex, and semaphore
- Write and explain a basic kernel module
- Trace a system call from user space to kernel
- Use debugging tools: `dmesg`, `strace`, `ftrace`, `perf`

## 📚 Quick Reference: All Links in One Place

## Final Tips for Success

1. **Focus on understanding, not memorization** Interviewers want to see you can reason through problems
2. **Practice explaining concepts out loud** Record yourself or explain to a friend
3. **Get hands-on experience** Even a simple module shows initiative
4. **Know your debugging tools** `dmesg`, `strace`, `gdb`, `perf`
5. **Be honest about what you don't know** It's okay to say "I'm not sure, but I would approach it by..."
